PL01 - INVISIBLE

One-click self-laying floor.

PL01 Invisible is a technical floor with a dry laying system. This is done by one-click coupling between tiles.

According to the criteria of the "Sustainable Project", guaranteeing well-being and attention to the environment, the one-click coupling system ensures that the installation is simple, immediate and effective, as well as reversible, if necessary. The elegant finishes in metal, recyclable and multi-purpose material, proposed in different textures, have a minimal thickness, can be quickly laid, reducing labor costs, and immediately walkable. They can be placed on screed or on old floors that you wish to cover, avoiding the inconveniences and the costs of demolition and disposal.

DESCRIPTION

Floor with metal finishes and rapid one-click installation on:

- screed;
- another floor you wish to cover;
- floating technical floor.

The patented one-click coupling is not invasive for the subfloor. The fixing takes place on the back of the tiles, therefore invisible on the surface.

INSTALLATION

The absence of laying adhesives and the total reversibility of

the floor mean that the **PL01 Invisible** system has optimal eco-sustainable characteristics. The one-click fastening adopted is perfect: stable, but also reversible. The rubber substrate attached to the tiles guarantees further stability and optimal sound absorption values. The coupling between tiles takes place by means of a pressure clip.

FINISHES

You can choose different finishes in natural or textured metal among:

- stainless steels (various textures);
- calamine steel;
- oxidized, brushed steel;
- stainless concrete.

To view the types of different finishes proposed, see the technical data sheet **Finishing Materials**.

FORMATS

To view the proposals of sizes and dimensions of modular tiles, refer to the technical data sheet **Finishing Materials**.

CLEANING OF SURFACES

For information on cleaning and maintenance of the finishes, see the technical data sheet **Finishing Materials**.

TESTS AND CERTIFICATIONS

To find technical information on the characteristics of the finishing metals, see the technical data sheet **Finishing Materials**. ECORUBBER®, used as the foundation of the tiles, is an agglomerate of high density vulcanized rubber granules. It is an excellent sound absorbent and anti-vibration, it is resistant to high and low temperatures.

SUSTAINABILITY

Planium selects the raw materials it uses to make its flooring and wall systems, with the concept of quality, environmental protection, safety, conservation of resources and recyclability. All the materials used are free of substances that are harmful to health and the environment. Planium systems are designed to add comfort to the rooms, in which they are installed, and guarantee, in the production processes with which they are made, a low environmental impact.

PL01 Invisible was designed in compliance with the principles of the eco-compatible project: the reversible installation, totally dry, without glues, does not damage the environment and makes disposal and recycling simple. The finishing tiles of the various collections in the catalog are all in metal, an ancient, natural and recyclable material.

Planium S.r.l., with passion and knowledge gives form to ideas, to creative projects refined, elegant, unique; we use technological innovation with experience, to give life to new surfaces, new contemporary environments. We shape metal, modeling it to measure, according to the tastes of the Client, taking care of it in detail, giving importance to quality and sustainability. Planium flooring and coating systems are, therefore, created: functional in installations, elegant in finishes, unique in this prestigious 100% made in Italy combination.
