# FF Systems - the company

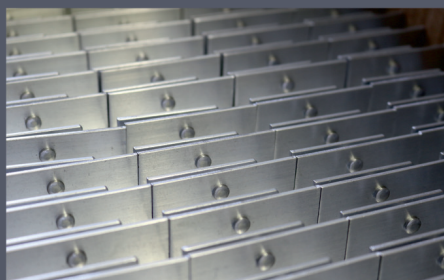

## The company - experienced and innovative!

The company FF Systems GmbH was founded in 1991 as FF Systembau GmbH. After more than 12 years of experience in the housing and finishing sector, the company began to specialise in the construction of access panels in 2003. In recent years, its international distribution network has been further expanded.

The company is based in Münchsdorf in Lower Bavaria.

Thanks to technically mature solutions and high quality standards in the product and service areas, FF Systems is now one of the leading companies in the manufacture of access panels.

The highest reliability of our products as well as our well-trained specialists ensure the sustainable success of the company.

## Product range - versatile and innovative!

The FF Systems product range includes access panels for ceiling, wall and floor. We manufacture access panels made of sturdy aluminium with plasterboard inlay or classic sheet steel access panels for ceilings and walls. All access panels are quick and easy to install and are available immediately from stock in many standard dimensions. In addition, special dimensions can be produced in any desired size.

The range of manhole covers/floor panels has also been optimised by the addition of further high-quality products. Manhole covers/floor panels made of aluminium, galvanised steel or stainless steel offer construction professionals all the solutions they need at the highest level of quality.

FF Systems offers you innovative solutions that ensure practical, hassle-free access to your maintenance shafts. Many standard dimensions are immediately available from stock. Special sizes can be produced in any desired size.

## Sustainability - Environmental Product Declaration (EPD)

The sustainability of construction is an essential part of FF Systems' corporate policy. Therefore, our company has its Environmental Product Declaration (EPD) according to DIN ISO 14025 as well as EN 15804 for certification according to DGNB, BNB, LEED or BREEAM.

## Fire protection - your specialist!

Especially when it comes to fire protection access panels for ceilings and walls, FF Systems can supply the right products for any requirement. Whether for 30 minutes EI30 (I30), 60 minutes EI60, 90 minutes EI90 (I90) or 120 minutes EI120: we have the necessary approvals.

Various fire protection products for different requirements are also available in the area of manhole covers/floor panels.

## Quality - a consistent corporate policy!

The highest product quality and absolutely reliable functionality of the products create safety already during installation. Therefore, quality management is not a foreign word for FF Systems, but a consistent company policy. Every employee feels obliged to carry it out. This begins with the use of raw materials and does not end with the delivery of the products: even after completion of the construction measure, our specialists are available to provide advice and assistance.

## Our goal

Our goal is to offer our customers a complete range of access panels for ceilings, walls and floors, thereby achieving the highest level of customer satisfaction.

# Access Panels ALU
